

Table A1. Boundary validation, 2020Q4-2025Q4

Measure	Matched N	Spearman ρ	Four-snapshot ICC	Interpretation
Internal financial capacity	13	0.59	0.94	Moderate rank persistence; excellent reliability
External-financing dependence	13	0.86	0.92	Strong rank persistence; excellent reliability
Growth-duration exposure	13	0.62	0.73	Moderate rank persistence; near-good reliability
Portfolio concentration	30	0.79	0.84	Strong ordering; good reliability
Financial architecture risk	13	—	0.82	Good composite reliability
Extended architecture risk	13	—	0.44	Weak long-span reliability; secondary measure

Note. Financial-channel results use the 13 funds meeting the conservative 80% match-weight threshold; concentration uses all 30 exact-series matches. The boundary exercise holds the 2025Q4 standardization parameters fixed and is used only for temporal validation.
