

Table 5. Persistent architecture and cumulative adjustment after extreme CPU episodes

Channel	Horizon	Coefficient	Raw p	Holm p	BH q
Internal financial capacity	3 months	-0.0174	0.00016	0.00327	0.00094
Internal financial capacity	6 months	-0.0378	<0.00001	<0.00001	<0.00001
Internal financial capacity	12 months	-0.0472	0.00022	0.00436	0.00098
External financing dependence	3 months	0.0353	0.00451	0.06309	0.00981
External financing dependence	6 months	0.0800	0.00026	0.00497	0.00098
External financing dependence	12 months	0.0604	0.04134	0.41336	0.06614
Growth-duration exposure	3 months	-0.0196	0.00617	0.07406	0.01139
Growth-duration exposure	6 months	-0.0485	0.00004	0.00098	0.00049
Growth-duration exposure	12 months	-0.0556	0.00006	0.00135	0.00049
Portfolio concentration	3 months	0.0075	0.12215	0.85508	0.16287
Portfolio concentration	6 months	0.0226	0.00358	0.05370	0.00859
Portfolio concentration	12 months	0.0231	0.02587	0.28458	0.04435
Financial architecture risk	3 months	0.0292	0.00225	0.03605	0.00601
Financial architecture risk	6 months	0.0631	0.00029	0.00517	0.00098
Financial architecture risk	12 months	0.0412	0.09803	0.78425	0.13840
Extended architecture risk	3 months	0.0295	0.00491	0.06380	0.00981
Extended architecture risk	6 months	0.0666	0.00034	0.00571	0.00101
Extended architecture risk	12 months	0.0475	0.06635	0.59714	0.09952

Note. Coefficients are cumulative return differentials associated with a one-standard-deviation increase in the persistent architecture score during extreme-CPU months. ETF and month fixed effects are included; standalone common monthly factors are absorbed by month effects.
